RESEARCH TRIANGLE PARK, N.C. – Environmental Science, a business unit of Bayer CropScience LP headquartered here, announced the formulation of the fungicide Armada has been changed from a wettable powder in water-soluble packaging to a water-dispersible granule.

The new Armada 50 WDG, which contains the active ingredients triadimefon and trifloxystrobin, was designed specifically for landscape professionals. It provides a broad spectrum of activity against most turf and ornamental diseases of concern in northern and southern climates.

The new water-dispersible granules will make the fungicide easier to measure and use, said Jimmy Johnson, fungicide product manager for Environmental Science.
