

Legacy Building Solutions Achieves ISO Certification

Source: www.TurfMagazine.com

SOUTH HAVEN, Minn. – [Legacy Building Solutions](#), a leading designer, manufacturer and installer of tension fabric buildings, has achieved ISO 9001:2008 certification, the highest quality-management certification standard available in industrial manufacturing. The comprehensive system audits cover every aspect of operations.

ISO 9001:2008 is a quality management system standard that was developed by the [International Organization for Standardization](#), which is an association of governmental and nongovernmental organizations from many countries. The ISO 9001:2008 standard is utilized to certify quality management systems that focus on continuous improvement, customer satisfaction and the active involvement of both management and employees in a process-based approach.

As part of the ongoing ISO certification process, Legacy will undergo an annual quality audit to ensure that every level of the organization—from engineering to manufacturing to customer service—is working toward continuous improvement to achieve greater customer satisfaction.

In addition to the new ISO 9001:2008 certification, Legacy has previously been recognized by the [Canadian Standards Association \(CSA\)](#) A660 certification program for steel building systems. To date, Legacy's in-house, professional installation crews have constructed more than 35 million square feet of fabric structures.
