

[Netafim Releases New Landscape & Turf Product Catalog for Drip/Micro Irrigation](#)

Source: www.TurfMagazine.com

Netafim USA has released a new Landscape & Turf Product Catalog that features the company's comprehensive line of drip and micro irrigation products. Netafim is among the world's leading manufacturers of water-efficient dripline tubing and has supplied low volume landscape irrigation products for more than 20 years. 

The new catalog can be downloaded as a PDF from the company's website (www.netafimusa.com/landscape) or can be requested by calling Netafim at 888-638-2346. It is also available on CD.

Along with detailed product specifications, performance data and ordering information, the catalog features useful technical tips for designing and installing a dripline system. Typical design layouts for on-surface and subsurface systems are included with installation guidelines and recommended components. Helpful reference information on soil types, slope irrigation, dripline calculations and application rates can also be found.

Netafim dripline products are used to irrigate trees, shrubs, turf and flower beds in residential and commercial installations, parks and sports fields.

Netafim's expanding line of landscape irrigation products is headed by Techline dripline, and also features Techline CV with check valve, Techline RW for use with reclaimed water, and Techline EZ for on-surface installations.

All Techline products are manufactured from recycled material and qualify for LEED credits. Techline is also recyclable when its productive life is over.

The company additionally offers a full-line of dripline installation

components: low-volume control zone kits, hydrometers, filters, valves, water meters, point source emitters and more.
