MOLINE, Ill. – People can test their operator skills with the [Small Machine vs. Big Jobs Challenge](#), an interactive game from [John Deere](#) Construction & Forestry. The game features the new [G-Series Skid Steers and Compact Track Loader](#). Players choose from one of the four skid steer models or the compact track loader to then compete in three applications – construction, landscaping and livestock. Each level involves players swiping the machine into a target. Based on the speed of the swipe, a score will register in mph. Players can advance through 10 levels, follow along with the fun through the real-time leaderboard and then share their scores via Facebook and Twitter.

“We’re excited to launch our new small-frame G-Series models to the market and wanted to invite customers and fans to get to know these machines in a different way,” said Graham Hinch, division manager, John Deere Commercial Worksite Products. “The Small Machine vs. Big Jobs Challenge will familiarize players with the models in our lineup while having a little fun.”

John Deere previewed the Small Machine vs. Big Jobs Challenge at [World of Concrete 2016](#) in Las Vegas. The game was played more than 260 times over the course of the show.
